

Work on the M5 East Beverly Hills

What we're doing

Tolling Gantry Work

Work to construct three tolling gantries will continue at the M5 East King Georges Road Beverly Hills off and on ramps as well as the main carriage way on the.

The initial work included a concrete pour for the permanent structure related to the tolling gantries located on the westbound King Georges Road off ramp along with early works including piling work to establish the placement of the tolling gantries.

Moving forward we are piling in the on-ramp median which will be followed by concrete pours for the gantry footings.

How this affects you

During this work a lane closure may be established on both the on and off ramps, as well as adjoining lanes, at King Georges Road interchange to ensure the safety of our workers and allow equipment access.

Signage will be in place to assist drivers through these changed conditions.

At the completion of each evening's work lanes will reopen to allow traffic flow.

Noise modelling has been conducted for work. Some of this work will be noisy.

The equipment used will include an excavator, construction vehicles, piling rig, cranes, concrete pump, concrete truck, vacuum truck, hand tools, concrete cutter, generator lighting and a plate compactor.

Residents adjacent to the M5 East may see the tolling gantry.

Tolls will not be charged during the testing phase and motorists will be advised prior to a toll being charged.

Maps showing the location of each work is provided overleaf

When

Tolling Gantry
